CorActive is a well financed independent developer and manufacturer of advanced Specialty Optical Fiber (SOF) products for OEM customers serving the LASER, telecommunications, sensor, defense, and aerospace industries. CorActive uniquely offers a full line of standard SOF products, including Double Clad, erbium doped, mid-IR transmission, ultra violet sensitive and attenuating optical fiber, plus custom fiber development services for specific applications. At CorActive we pride ourselves in providing technologically advanced specialty optical fiber products that uniquely enable our customers to offer superior products and services.

CorActive's Specialty Optical Fiber products can be viewed at:

<http://www.CorActive.com/an/products.htm>

CorActive's specialty optical fiber product offerings include:

- **Double Clad Optical Fiber** - used in high power LASER & Amplifier applications. LMA, Erbium, Ytterbium, co-doped and other versions.
- **Mid-IR Transmission Fiber** - provides high quality, low loss IR Transmission in the 2 to 9 um range. Single mode versions. Highly Non Linear Fiber (HNLF)
- **Fiber Laser Subsystems** - a complete OEM laser cavity including DCOF, pump combiner, gratings and packaging. **Transferable IP license.**
- **Erbium Doped Fiber** - much lower noise figure enabling a lower OSNR in an EDFA with CorActive fiber. High gain versions. Attractive pricing options. *Cost reduced and high flatness versions of CorActive's Erbium doped fibers are available for EDFA manufacturers to enhance their offerings and profitability.*
- **Fiber Bundles and Beam Delivery Fibers** - serving your needs for custom fibers and assemblies
- **Ultra Violet Sensitive Fiber** - low cladding mode losses, no hydrogen loading required, low coupling losses to Single Mode fiber.
- **Attenuating Fiber** - broad attenuation range, tight tolerances and one of the world's largest attenuating optical fiber manufacturers.
- **Custom Optical Fiber Design** - CorActive provides custom optical fiber design services customers with high volume applications and specific requirements.
