

doric

doric lenses

Doric Lenses Inc is manufacturer of optical and photonics components and service provider for micro-photonics assemblies, photonics manufacturing and photonics supply chain management.

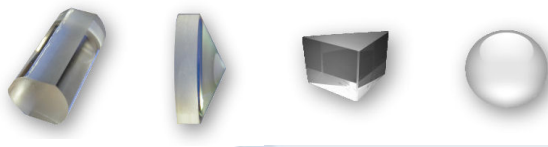

Optical components

Off-the-shelf components: Patented gradient-index cylindrical lenses, rods, acylindrical lenses, axicons, ball lenses, simple aspheric lenses, etc. We invite you to explore our on-line catalogue.

Custom parts: Lenses, flats, wedges, cubes, mirrors etc. Modification of customer supplied optical parts has been popular service for many years now.

Fiber preform shaping services: Includes shaping of the fiber preforms into hexagonal, heptagonal and octagonal formes, polishing of holes inside the specialty fiber preforms etc.

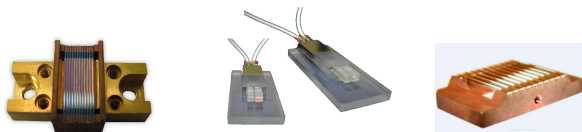

Photonics components

LED fiber pigtailed, fiber pigtailed Fabry-Perot filters and etalons, fiber optic comutators, fiber optic spectrometers, fiber optic splitters, high precision beamsplitters etc.

Micro-photonics assemblies

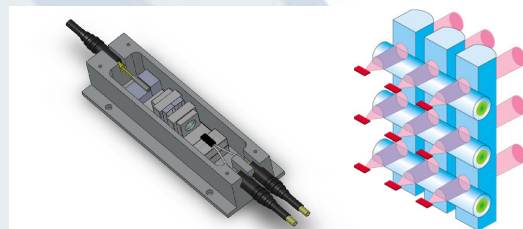

Single laser diode lensing, laser diode arrays lensing, assemblies involving polished fiber arrays or patchcords with custom micro-optical components.

Photonics manufacturing services

We serve photonics OEMs (original equipment manufacturers) and research centers. This could be in form of LD bar lensing, assembly of photonics modules or complete photonic instruments. Handling and assembly of micro-optic components is our specialty.

We engage in ODM (original design manufacturing) by doing everything from feasibility study to design, prototyping and initial serial production of photonics products. Sometimes, it makes perfect sense for large OEMs or "fables" operators that focus on sale and marketing often prefer to subcontract R&D photonics activities to specialized companies.

Photonics supply chain management

By being deeply involved in photonics manufacturing we relay on large network of suppliers and often benefit from volume pricing, shipping and handling. Each component is subjected to our rigorous quality inspection to assure the required quality levels.
